

Installing Antares Charts on a friend's iPad using your PC or Mac

The problem:

when you connect an iPad or iPhone to a PC or Mac with iTunes installed, the devices will try to sync. That's fine if both devices belong to you but less good if they don't!

The solution:

Before connecting anything, **open iTunes** on the PC or Mac

Go to '**Edit**' (top left) and then '**Preferences**' and then '**Devices**'

And tick the box '**Prevent iPods, iPhones and iPads from syncing automatically**'

Then click on **OK**

Then connect the friend's device and transfer the charts

Then consider unclicking the 'do not sync' box before closing iTunes

The above advice was supplied by a friend of Antares Charts. We have not tried it but it seems entirely logical!
